

Faculty of Science & Technology Programme Structure & Syllabus

For

Second Year

Bachelor of Technology Computer Engineering

Programme Code: BTECCE

Pattern 2023

< With Effect from Academic Year 2024-25>

| | Authority | Date |
|-------------|--|------|
| Proposed by | Board of Studies in Computer Engineering | |
| Approved by | Academic Council, Vishwakarma University, Pune | |

Issued by

Chairman – BoS

Dean of Faculty

Director, IQAC

Form No: IQAC-101

Title: Programme Structure and Syllabus

| Vision of the University | | | | | |
|--|--|--|--|--|--|
| ge as a Premier University Recognized Intern | ationally for Excellence in Education, Research and | | | | |
| Innov | vation | | | | |
| | | | | | |
| Mission of the | ne University | | | | |
| To impart contemporary transformative edu | cation through research and innovation | | | | |
| To develop competent leaders-professionals | s for life and livelihood | | | | |
| VU-M3 To co-create human and socio-economic capital par excellence | | | | | |
| To inculcate life skills and holistic culture a | ppreciating morals and ethics | | | | |
| 1 | | | | | |
| Values of the | e University | | | | |
| Excellence | Transparency | | | | |
| Innovation Sustainability | | | | | |
| Diversity Responsibility | | | | | |
| Adaptability | Compassion | | | | |
| | Mission of the To impart contemporary transformative educe To develop competent leaders-professionals To co-create human and socio-economic care To inculcate life skills and holistic culture as Values of the Excellence Innovation Diversity | | | | |

| | Vision of the Department of Computer Engineering | | | | | | | |
|---|---|--|--|--|--|--|--|--|
| To cr | eate an intellectual and academically rich environ | ment for careers in Computing Education and Research | | | | | | |
| | to fulfill global needs. | | | | | | | |
| | | | | | | | | |
| | Mission of the Department of Computer Engineering | | | | | | | |
| M1 | M1 To impart modern computing education through novel methods and research. | | | | | | | |
| M2 To prepare the students for life-long learning in pursuit of excellence. | | | | | | | | |
| M3 | To create technically competent human in socio | -economic domain. | | | | | | |
| M4 | To promote aspiring ethically conscious engineer | ers demonstrating sustainable entrepreneurship and | | | | | | |
| | professional maturity in social context. | | | | | | | |
| | Values of the Department | of Computer Engineering | | | | | | |
| Pursui | ing Excellence | Ethics & Social Responsibility | | | | | | |
| Nurtu | ring Talent | Collaborative Approach | | | | | | |
| Career | r Architect | Sustainable Growth Transparency & Accountability | | | | | | |
| Innova | ative Outlook | Freedom of Expression | | | | | | |

Mapping of Mission Statement of Department to University Mission Statement

| Mission Statement | VU-M1 | VU-M2 | VU-M3 | VU-M4 |
|-------------------|-------|-------|-------|-------|
| M1 | 3 | 3 | 2 | 2 |
| M2 | 1 | 2 | 2 | 3 |
| M3 | 2 | 3 | 2 | 2 |
| M4 | 1 | 1 | 2 | 3 |

Programme Educational Objectives (PEOs)

| PEO No. | Statement |
|---------|--|
| PEO1 | To prepare the students to evolve into a professional and committed technology workforce, by |
| | providing them with a global educational platform with innovative practices. |
| PEO2 | To provide a sufficient mathematical and computing theory knowledge base, leading to practical |
| | and long lasting computer engineering solutions. |
| PEO3 | To ingrain problem solving skills and sound engineering principles in students with the help of modern |
| | tools and techniques. |
| PEO4 | To impart in the students professional and ethical practices based on standard guidelines to acquire |
| | the right attitude and aptitude for the benefit of society. |
| PEO5 | To guide ambitious students for higher education and lead them to avenues of entrepreneurship in |
| | emerging areas of computing. |

Mapping of Mission Statement of Department to PEOs

| Mission Statement | PEO1 | PEO2 | PEO3 | PEO4 | PEO5 |
|-------------------|------|------|------|------|------|
| M1 | 3 | 3 | 3 | 1 | 2 |
| M2 | 2 | 2 | 3 | 3 | 2 |
| M3 | 3 | 3 | 2 | 2 | 1 |
| M4 | 2 | 1 | 2 | 3 | 2 |

Programme Outcomes (POs)

| PO No. | Statement |
|--------|--|
| PO1 | Apply the knowledge of engineering and science fundamentals to the solution of complex engineering problems. |
| PO2 | Identify, formulate and analyze complex engineering problems to create solutions using the First principles of engineering sciences and mathematics. |
| PO3 | Design solutions for design system components that meet the specified needs for the benefit of society. |
| PO4 | Apply research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO5 | Create appropriate techniques and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations. |
| PO6 | Apply reasoning using contextual knowledge to assess the needs of society and understand The responsibilities relevant to the professional engineering practice. |
| PO7 | Understand the impact of professional engineering solutions as applied to the environment, And demonstrate the knowledge for sustainable development. |
| PO8 | Adopt ethical practices as applied to the professional world to execute responsibilities and adhere to norms of the engineering profession. |
| PO9 | Execute professional functions effectively as an individual, as well as a leader or member in Diverse multidisciplinary teams. |
| PO10 | Communicate effectively with the engineering community and with society in solving complex problems in terms of being able to comprehend and write effective reports, make Effective presentations, as well as execute and receive clear instructions. |
| PO11 | Demonstrate an ability to lead projects and build cost models in an interdisciplinary professional Setting |
| PO12 | Develop learning mechanisms and inculcate the ability to prepare for lifelong learning in the context of technological change. |

Mapping of PEOs to POs

| PEO Number | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| PEO1 | 2 | 3 | 2 | 3 | 1 | 2 | 3 | 1 | 1 | - | - | 2 |
| PEO2 | 3 | 3 | 2 | 3 | 1 | 1 | 2 | 1 | - | 1 | 1 | 1 |
| PEO3 | 2 | 2 | 2 | 2 | 3 | 1 | 3 | 1 | - | 1 | - | 2 |
| PEO4 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 3 | 3 | 2 | 2 | - |
| PEO5 | 2 | 2 | 2 | 2 | 1 | 1 | 1 | 1 | 1 | - | 2 | 1 |

Programme Specific Outcomes (PSOs)

| PSO No. | Statement |
|---------|---|
| PSO1 | Imbibe foundational knowledge of computing theory, algorithms and programming paradigms to |
| | create innovative, scientific solutions for complex computing challenges. |
| PSO2 | Prepare for the latest trends in industry by adapting to various computing platforms, architectures and |
| | changing software paradigms. |
| PSO3 | Evolve new design ideas for real world problems using appropriate mechanisms, design patterns, |
| | modeling methods and modern tools. |
| PSO4 | Inculcate research attitude and aptitude in students using techniques and standards as applied to |
| | technology migration and evolution. |

Mapping of PEOs to PSOs

| PEO Number | PSO1 | PSO2 | PSO3 | PSO4 |
|------------|------|------|------|------|

Course Description

This course helps the student to study the representation and applications of Stack and Queue data structures, tree data structure and its traversals. It also focuses on graph data structure and usage of hashing techniques.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | To understand the representation and applications of stack and Queue data structure. |
| 2 | To perform various operations on linked lists. |
| 3 | To demonstrate the use of binary tree traversals and perform operations on them. |
| 4 | To Use advanced trees and its applications for various purposes. |
| 5 | To Apply the Graph data structure to solve the applications of it and use hashing techniques. |

Mapping of COs to POs and PSOs

Course Description

The course will enable students to understand the essential concepts, tools, and methodologies in the field of data science. Students will gain the skills and hands on practice needed to analyze, visualize and interpret data effectively to address real-world data challenges

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Gain basic understanding of data science principles and life cycle. |
| 2 | Interpret data transformation and data measurement operations. |
| 3 | Apply basic data cleaning and transform variables to facilitate analysis. |
| 4 | Analyze different types of data using statistical operations. |
| 5 | Apply standard data visualization and formal inference procedures. |

Course Description

This course helps the student to learn financial planning & control, practical aspects of Account. Focuses on financial management skills to practical situations.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Implement financial knowledge in real life related to personal context and business context. |
| 2 | Gain a comprehensive understanding of the structure and evolution of the Indian banking system. |
| 3 | Understand various intelligent sources for investment by analyzing capital, insurance and risks |
| | Involved in processing. |
| 4 | Explain balance sheet. |
| 5 | Acquaint the current financial trends. |

Course Description

This course provides an introduction to programming and the Python language with core programming concepts like data structures, conditionals, loops, variables, and functions. This course includes an overview of the various tools available for writing and running Python and coding quickly. It also provides hands-on coding exercises using commonly used data structures, writing custom functions, and reading and writing to files. It also introduces to advanced Python programming concepts.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | To understand basic concepts in Python |
| 2 | To develop applications employing different object-oriented concepts |
| 3 | To implement linear algebra functions for arrays using NumPy |
| 4 | To demonstrate high-performance data manipulation and analysis using Pandas Library |
| 5 | To plot data visualization using Matplotlib and Seaborn libraries. |

List of Experiments

| 1 | Create variables of different data types (integer, float, string, boolean). Perform basic operations on them and |
|----|--|
| | print the results along with their types using the type () function. |
| 2 | Create an array, perform various operations such as insertion, deletion, searching for elements, and iterating |
| | through the array. Compare the performance of arrays with lists for certain operations. |
| 3 | Write a program to read data from a text file, process the data (such as counting words, lines, and characters), |
| | and write the processed data to a new file. Handle potential exceptions that may occur during file operations. |
| 4 | Create a program that raises and handles various types of exceptions (such as Value Error, Type Error, and |
| | FileNotFoundError). Define and raise custom exceptions to handle specific error conditions in your program. |
| 5 | Write a program in Python to demonstrate the concept of a Constructor |
| 6 | Write a program in Python to demonstrate the concept of Interface |
| 7 | Write a program in Python to demonstrate the concept of Inheritance. |
| 8 | Write a program to install NumPy and create arrays using lists and built-in functions. Display the created |
| | arrays and their attributes |
| 9 | Write a program to create a NumPy array and reshape it into different dimensions. Transpose of the reshaped |
| | array and demonstrate swapping axes. |
| 10 | Write a program to create two NumPy arrays and perform element-wise addition, subtraction, multiplication, |
| | and division. Use universal functions to compute square root, logarithm, and exponential of array elements. |
| 11 | Write a program to demonstrate various indexing techniques (e.g., accessing specific elements, rows, |
| | columns) and slicing operations to extract subarrays. Include examples of Boolean and fancy indexing. |
| 12 | Write a program to create a NumPy array and calculate its mean, median, standard deviation, and variance. |
| | Use advanced statistical methods to compute percentiles and correlation coefficients. |
| 13 | Write a program to read data from a CSV file using Pandas. Display the first few rows (head()), information |
| | (info()), and basic statistics (describe()) of the DataFrame. Save the modified DataFrame to a new CSV file. |
| 14 | Write a program to create a DataFrame from a dictionary of lists. Use methods like head(), tail(), info(), and |
| | describe() to explore and summarize the DataFrame. |
| | |

| 15 | Write a program to group data in a DataFrame by a specific column using group by() and compute aggregate |
|----|---|
| | statistics (e.g., sum, mean) on grouped data. |
| 16 | Write a program to filter rows from a DataFrame based on a condition using boolean indexing or the query() |
| | method. Sort the filtered DataFrame by a specific column using sort_values(). |
| 15 | Write a program to handle missing values in a DataFrame using fillna() or dropna() methods. Perform |
| | aggregation operations (sum(), mean(), etc.) on columns of the DataFrame. |
| 17 | Write a program to create a simple line plot, scatter plot, histogram, and bar plot using Matplotlib. Customize |
| | each plot with appropriate labels, titles, colors, and markers. |
| 18 | Write a program to create a box and whiskers plot and an area plot using Matplotlib. Include multiple subplots |
| | in a single figure to display different plots side by side. |
| 19 | Write a program to create a scatter plot, histogram, bar plot, box plot, and violin plot using Seaborn. Visualize |
| | correlations between multiple variables using the pair plot function. |
| 20 | Write a program to demonstrate various indexing techniques (e.g., accessing specific elements, rows, |
| | columns) and slicing operations to extract subarrays. Include examples of Boolean and fancy indexing. |

Course Description

This course Develop awareness about environmental issues and also Develop an understanding based on observation and illustration drawn from lived experiences and physical, biological, social and cultural aspects of life, rather than abstractions.

Course Outcomes

| CO No. | Statement |
|--------|--|
| 1 | Understand scope of Environmental science, Study different kinds of Ecosystems |
| 2 | Gather information about different environmental resources |
| 3 | Understand concept of sustainability and sustainable development |
| 4 | Understand requirement and meaning of Biodiversity and threats and challenges to maintain it |
| 5 | Understand severity of pollution and develop thought process to reduce it |

Course Description

The course will enable student understand, explain and apply the foundational Mathematical Concepts at the core of Computer Science. It will also enable Students to Model Problem Using Graph & Trees, to Understand set, function and relational models to understand Practical Examples and Interpret the associated Operations and Terminologies in Context, to acquire the knowledge of logic and proof techniques, To Learn how abstract algebra is used in coding theory.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Formulate problems precisely, solve the problems, apply formal proof techniques, and explain the |
| | reasoning clearly. |
| 2 | Apply appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar |
| | situations including those in real-life contexts. |
| 3 | Design and analyze real world engineering problems by applying set theory, propositional logic and to |
| | construct proofs using mathematical induction. |
| 4 | Specify, manipulate and apply equivalence relations; construct and use functions and apply these |
| | concepts to solve new problems. |
| 5 | Model and solve computing problem using tree and graph and solve problems using appropriate |
| | algorithms. |

Course Description

This course helps the student to understand the role of Computer Graphics in Animation and Gaming. The C Programming and fundamentals of Data Structures is the prerequisite for this course. The course highlights the drawing of basic geometric shapes with 2D and 3D transformations and clipping of objects. It also introduces the basics of animation and gaming platforms.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Understand computer graphics fundamentals and use algorithms to draw line, circle, and |
| | polygons. |
| 2 | Perform various transformations and numerical on 2D object and apply different clipping |
| | algorithms on polygons. |
| 3 | Apply transformations on 3D objects and systematically solve numerical problems based on transformations and projections. |
| 4 | Detect hidden surfaces and interpret the difference between curves and fractals. |
| 5 | Construct animation based demonstrating system using segments and various gaming platforms. |

| Overview of Computer Graphics, Computer Graphics Application and Software, Display adapters, Display modes, Pixel, Frame Buffer, Display devices, Aspect Ratio, Display file structure, Display file interpreter. Mathematical foundations: Lines and line representations, Intersection of lines, NormalizedDevice Coordinates (NDC). Scan conversions: DDA and Bresenham's line drawing algorithms, Bresenham and Midpoint circle drawing algorithms, Aliasing and Anti-aliasing, Polygons: Introduction, Types of polygons, Inside-outside test of polygon. Polygon filling algorithms:Seed fill, Boundary fill, Edge fill, Fence fill, Scan line fill algorithm. Unit No 2 2D Transformations and Clipping Hours 9 AP 2D Transformations: Introduction, Scaling, Rotation, Translation, Derivation of matrix representation of 2D transformation, Homogeneous coordinates for transformations, Reflection Transformations, rotation about an arbitrary point, Inverse transforms, and shear transforms. Numerical Problems on 2D transformation. Windowing and Clipping: Introduction, Window, Viewport, Window to viewport transformation, Line clipping: Cohen Sutherland algorithm, Mid-point line clipping algorithm, |

Course Description

The course will enable student understand the different issues involved in the design and implementation of a database system. Student will learn the physical and logical database designs, database modeling, relational, hierarchical, and network models. Student will learn to use data manipulation language to query, update, and manage a database. Student will understand essential DBMS concepts such as: database security, integrity, concurrency, storage strategies etc. The students will get the hands-on practice of using SQL and PL/SQL concepts.

Course Outcomes

| CO No. | Statement |
|--------|--|
| 1 | Design and construct data models, logical database models of an organization |
| 2 | Develop a database system using relational database query languages and PL/SQL |
| 3 | Apply and relate the concepts of transaction, concurrency control, recovery and security in database |
| 4 | Recognize the purpose of query processing, optimization and demonstrate the SQL query evaluation |
| 5 | Build a database management system that satisfies relational theory and provides users with business |
| | queries. |

List of Experiments

- 1 Create tables with appropriate constraints for the relational schema.
 - a) Create Views on the table.
 - b) Create Indices on the table
 - c) Create Sequence on the table
 - d) Alter the schema by adding/removing columns and constraints.

Write DML queries.

- 2 Execute 'SELECT' queries on the suitable database by using the following methods.
 - a) Using order by clause
 - b) Using group by clause
 - c) Using aggregate functions
 - d) Using having clause
 - e) Using set operators.
 - f) Use SQL single row functions for date, time, string etc.
- **3** Create suitable database and perform following operations.
 - a) Write equijoin, non-equijoin, self-join and outer join queries.
 - b) Write queries containing single row / multiple row / correlated subqueries using operator like
 - c) Write queries containing single row / multiple row / correlated subqueries using operator =
 - d) Write queries containing single row / multiple row / correlated subqueries using operator in
 - e) Write queries containing single row / multiple row / correlated subqueries using operator any
 - f) Write queries containing single row / multiple row / correlated subqueries using operator all
 - g) Write queries containing single row / multiple row / correlated subqueries using operator exists.
 - Write DML queries containing subqueries. Study a set of query processing strategies.
- 4 Choose a suitable database system and perform following operations
 - a) Write meaningful stored procedures in PL/SQL.
 - b) Make use of cursors and different arguments.
 - c) Write useful stored functions to perform complex computation.
 - d) Write row level and statement level triggers in PL/SQL.
- 5 Choose a suitable database system you propose to work.
 - a) Perform requirements analysis in detail for design of the database.
 - b) Design an entity-relationship (ER) data model for the selected database system.
- **6** Develop a Mini project in a group by using all the concepts you have learnt.

Course Description

This course helps to learn Object Oriented programming paradigm with help of JAVA, java advanced concepts and API. Identifies and analyzes real world practices of web and database implementation.

Course Outcomes

| CO | Statement |
|-----|--|
| No. | |
| 1 | Extend their knowledge in utilizing the appropriate advanced features of Java for using emerging |
| | frameworks. |
| 2 | Understand database programming using JDBC and exception handling. |
| 3 | Design dynamic web application. |
| 4 | Compare the servlet and JSP usage in dynamic web design |
| 5 | Use best practices of advanced database technologies. |

Course Description

This course helps the student to understand the project planning, budgeting process. It will also focus on risk analysis, creation of effective and deliverable project plans. It will also identify roles and work with cross functional teams.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Understand the basics of Project Management and importance of knowledge areas |
| 2 | Estimate scope and time factor for project. |
| 3 | Implement Project Quality factors |
| 4 | Analyze Human Resource requirements |
| 5 | Predict risks associated with Project Management activities |

Course Description

This course on Leadership and Personality Development equips students with essential leadership skills and fosters personal growth. It focuses on understanding leadership theories, self-awareness, communication skills, team dynamics, and ethical practices to prepare students for effective leadership roles in professional and personal contexts.

Course Outcomes

| CO No. | Statement |
|--------|---|
| CO1 | Analyze different leadership styles and apply them in professional settings. |
| CO2 | Identify personal strengths and weaknesses using personality assessments. |
| CO3 | Develop effective communication and interpersonal skills for leadership roles. |
| CO4 | Foster teamwork and collaboration using conflict resolution strategies. |
| CO5 | Connect academic knowledge with industry practices through interaction with industry professionals. |

| Total | 2 Hr./Week | Total | 2 | | | |

Course Description

This course helps the student to transition smoothly from a campus environment to the corporate environment. It aids the student to understand the evolution of a industry, understand how a typical company in this industry or domain are set up and organized, how to apply knowledge gained into practical situations, gaining life skills, and learning the basics of entrepreneurship.

Course Outcomes

| CO No. | Statement |
|--------|---|
| 1 | Examine how a typical company in this industry or domain is set up and organized, its evolution and |
| | how to dissect it. |
| 2 | Apply knowledge to various aspects of industry such as design thinking, product solutions, |
| | management and specifications. |
| 3 | Imbibe life skills such as continuous learning and improvement, time management, multitasking |
| | and communication. |
| 4 | Understand the different aspects of entrepreneurship and study the entrepreneurial mindset. |
| 5 | Analyze case studies of various types of industries. |

Course Content

| Unit No 1 | Companies & Industry | Hours 5 | CO | BTL |
|--------------------|--|-------------------|----|-----|
| EVOLUTION O | F TECHNOLOGY: Understand the evolution of a industr | y / domain and | 1 | UN |
| how it has change | d over time and why. | | | |
| INNOVATION A | AGE: Understanding Innovation and how new Impactful id | eas have evolved. | | |

| COMPANY ORGANIZATION: Understand how a typical compan | y in this industry or | | |
|---|------------------------------|---|----------|
| domain are set up and organized. What are the commonalities and wh | at can change based on | | |
| size or type within the domain. | | | |
| UNDERSTANDING COMPANIES: Understanding companies - D | _ | | |
| Customers, Strategy. Understand how to dissect a company to get a 3 | · · | | |
| domain, products, customers they serve and what seems to be their str | | | |
| Unit No 2 Application of Knowledge | Hours 10 | 2 | AN |
| PRODUCT SOLUTIONING: Product Solutioning and Developmen | | | |
| the theory. Understand how products are solutioned and built and what | | | |
| considerations in the real world to create a effective product development | <u> </u> | | |
| PRODUCT MANAGEMENT: Product Management - Understanding | ng beyond the theory. | | |
| Understand how opportunities and ideas are evangalised and translate | ed into product | | |
| specifications and offerings for the market | | | |
| METRICS AND MEASUREMENTS: What is not measurable is no | ot real. Understand | | |
| metrics/KPIs/OKRs as they are used in the industry to measure various | is aspects of product, | | |
| operations and company performance. | | | |
| DESIGN THINKING: Design Thinking is a creative approach that p | oulls together what's | | |
| designable from a human point of view with what is technologically f | Feasible and economically | | |
| viable. | | | |
| UNDERSTANDING UX AND UI: UX is how products are seen, un | nderstood and consumed by | | |
| customers. what makes it a great experience for a customer and how p | products are designed for | | |
| the best possible experience Usability by end user - UX and other key | concepts and its | | |
| importance. | | | |
| EFFECTIVE PRODUCT SPECIFICATIONS: Writing good production | uct or service | | |
| specifications which can be translated to building a good product . Ho | ow to understand a need in | | |
| the market and translate it into detailed specifications with good cover | rage of use cases and | | |
| application and which can be used to build a good product or service. | | | |
| DOING EFFECTIVE RESEARCH: How to do effective product, or | competition or technical | | |
| research and use it effectively . Doing research and using it effectively | y for your needs is | | |
| essential in a company. Understand how to do it effectively and use it | .• | | |
| RELEASING A PRODUCT TO THE MARKET: What it takes to | release a product to the | | |
| market right every time. Understand the importance and techniques of | f releasing a product to the | | |
| market and what all has to be considered to you get it right the first time | me. | | |
| QUALITY - UNDERSTANDING BEYOND THE THEORY: Qua | ality starts right from | | |
| deciding what to build and creating requirements to all the way to bei | ng able to maintain it | | |
| easily. Understand what is Quality in the industry and what all you ha | we to consider and plan for | | |
| to get end to end quality for your product or service. | | | |
| TESTING & AUTOMATION: Testing and testing automation - uno | derstand beyond the theory | | |
| . What is effective testing coverage and automation . How those choice | ces on what to test, how | | |
| much and what needs to be automated are made and what type of auto | omations exist. | | |
| SOURCE CODE CONTROL: Importance of source code control ar | _ | | |
| LIFECYCLE: Understand common and key tools used in the industry | ry and what their purpose | | <u> </u> |

| is and how they ca | an be used effectively. | | | | |
|--|---|---------------------|---|----|--|
| Unit No 3 Life Skills Hours 7 | | | | | |
| CONTINUOUS | LEARNING AND IMPROVEMENT: Continuous learn | ning cannot happen | | | |
| accidently . Unde | rstand the technique to identify learning areas and follow | through on making | | | |
| the learning happe | en. | | | | |
| OWNERSHIP: 0 | Ownership is a widely used word but how does one underst | and how to measure | | | |
| it and thus demon | | | | | |
| TIME MANAGI | EMENT AND MULTI TASKING: Learn how to manage | time and multi task | | | |
| effectively and wi | th proper priority scheme. | | | | |
| BEING AN EFF | ECTIVE MENTEE AND MENTOR: How does one bed | ome a good mentee | | | |
| • | t of a mentor and how to effectively mentor when you are i | | | | |
| ~ | ITIVE: Why asking questions is more difficult than giving | | | | |
| exercise. How to manage fear and have a way to understand and ask effective questions and learn. | | | | | |
| ARTICULATION AND COMMUNICATION: What is communication vs articulation and | | | | | |
| how does one do good articulation to get the message across most effectively. What is | | | | | |
| communication vs articulation and how does one do good articulation to get the message across | | | | | |
| most effectively | | | | | |
| | NTRODUCTIONS: How to present yourself and do imp | - | | | |
| | xpectations, constraints and make the most of the opportun | * - | | | |
| | OSS AND BEYOND: Role and importance of first boss in | _ | | | |
| Unit No 4 | Entrepreneurship | Hours 4 | 4 | AN | |
| | rn what 'sales' is and different types by product and industr | y. Understand | | | |
| | lles techniques, metrics and success criteria | | | | |
| | STARTUPS: What does it mean to bootstrap a company a | | | | |
| | enges and best practices to attract funding and stand out for | | | | |
| | CCESS AND ENTREPRENEURAL MINDSET: Can a | = | | | |
| | we need to develop a mindset, skill set and temperament | | | | |
| | ess at various stages of. a startup and how to understand an | | | | |

Course Description

This course develops awareness about environmental issues and also develop an understanding based on observation and illustration drawn from lived experiences and physical, biological, social and cultural aspects of life, rather than abstractions.

Course Outcomes

| CO No. | Statement |
|--------|--|
| 1 | Gain a comprehensive understanding of major environmental issues such as climate change, global warming, |
| | ozone layer depletion, acid rain, and their impact on human societies and ecosystems. |
| 2 | Learn about the environmental laws, policies, and international agreements designed to address environmental |
| | problems. |
| 3 | Explore human-environment interactions, including the impact of human populations on the environment and |
| | the principles of sustainable development. |
| 4 | Understand disaster management strategies, including monitoring, prediction, and mitigation of natural |
| | disasters. |
| 5 | Develop skills in environmental communication and public awareness campaigns to promote sustainable |
| | practices in communities. |

Course Description

This course introduces students to the mathematical foundations of computation including automata theory; the theory of formal languages and grammars; the notions of algorithm, decidability, complexity, and computability. Provides knowledge on mathematical proofs for computation and

Course Outcomes

| CO No. | Statement |
|--------|--|
| 1 | Infer the applicability of various automata theoretic models for recognizing formal languages. |
| 2 | Discriminate the expressive powers of various automata theoretic and formal language theoretic computational models. |
| 3 | Illustrate significance of non-determinism pertaining to expressive powers of various automata theoretic models. |
| 4 | Comprehend general purpose powers and computability issues related to state machines and Grammars. |
| 5 | Explain the relevance of Church-Turing thesis, and the computational equivalence of Turing machine model with the general purpose computers. |

Course Content

| Introduction to Automata, Computability and Complexity theory, Automaton as a model of computation, Central Concepts of Automata Theory: Alphabets, Strings, Languages. Decision Problems Vs Languages. Finite Automata, Structural Representations, Deterministic Finite Automata (DFA)-Formal Definition, Simplified notation: State transition graph, transition table, Language of DFA, construction of DFAs for Languages, Productconstruction, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Conversion of NFA with epsilon transitions to DFA, Automata with output. Applications and Limitation of Finite Automata. Unit No 2 Regular and Non Regular Languages Regular expression (RE), Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleene's Theorem: Equivalence Regular expressions and DFAs, Closure properties of Regular Languages (union, intersection, complementation, concatenation, Kleene's closure). Applications of Regular expressions, Myhill-Nerode theorem and its applications: proving non-regularity, lower bound on number of states of DFA, State Minimization algorithm, Equivalence testing of DFAs. Non Regular Languages, Pumping Lemma for regular Languages. Unit No 3 Context Free Grammars (CFG) Unit No 4 Push Down Automata (PDA), Non-Context Free Hours 9 Languages, Context Sensitive Languages Context Sensitive Languages Push Down Automata: Description and definition, Language of PDA, Acceptance by Final state, Acceptance by empty stack, Deterministic, Non-deterministic PDAs, CFG to PDA construction (with proof). Equivalence of PDA and CFG (without proof). Closure properties of CFLs (Union, Concatenation, Kleene closure, reversal). Intersection of CFLs and Regular language. Pumping lemma for CFLs. Context Sensitive Languages: Definition and Examples of Context Sensitive Grammars, Linear Bounded Automata. Chomsky hierarchy of languages. Context Sensitive Languages: Definition and Examples of Context Sensitive Grammars, Linear Bounded Automata. Chomsky hierarchy of languages. Unit No 5 Introduction to Turing Machines Turing Machines | | | | 1 | AI |
| Automata (DFA)-Formal Definition, Simplified notation: State transition graph, transition table, Language of DFA, construction of DFAs for Languages, Productconstruction, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Conversion of NFA with epsilon transitions to DFA, Automata with output. Applications and Limitation of Finite Automata. Unit No 2 Regular and Non Regular Languages Regular expression (RE), Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleene's Theorem: Equivalence Regular expressions and DFAs, Closure properties of Regular Languages (union, intersection, complementation, concatenation, Kleene's closure). Applications of Regular expressions, Myhill-Nerode theorem and its applications: proving non-regularity, lower bound on number of states of DFA, State Minimization algorithm, Equivalence testing of DFAs. Non Regular Languages, Pumping Lemma for regular Languages. Unit No 3 Context Free Grammars (CFG) Unit No 3 Context Free Grammars (CFG) Constructing CFG. Derivation trees, Ambiguity in CFGs, Removing ambiguity, Inherent ambiguity. Simplification of CFGs, Normal forms for CFGs: CNF and GNF. Applicationsof CFG. Unit No 4 Push Down Automata (PDA), Non-Context Free Languages, Context Sensitive Languages Push Down Automata: Description and definition, Language of PDA, Acceptance by Final state, Acceptance by empty stack, Deterministic, Non-deterministic PDAs, CFG to PDA construction (with proof). Equivalence of PDA and CFG (without proof). Closure properties of CFLs (Union, Concatenation, Kleene closure, reversal). Intersection of CFLs and Regular language. Pumping lemma for CFLs. Context Sensitive Languages: Definition and Examples of Context Sensitive Grammars, Linear Bounded Automata. Chomsky hierarchy of languages. Unit No 5 Introduction to Turing Machines Unit No 5 Introduction to Turing Machine, Church's Machine, Robustness of Turing Machine model and equivalence with various variants: Two | - | | | | |
| Language of DFA, construction of DFAs for Languages, Productconstruction, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Conversion of NFA with epsilon transitions to DFA, Automata with output. Course Description

This course provides a foundational understanding of application security concepts, vulnerabilities, and best practices. It equips students with the knowledge and skills to secure applications against common threats, emphasizing the OWASP Web Application Security Testing Guide and industry standards.

Course Outcomes

| CO | Statement |
|-----|--|
| No. | |
| 1 | Understand and apply secure software development principles. |
| 2 | Analyze and mitigate common web application vulnerabilities. |
| 3 | Conduct application security testing using industry-standard tools. |
| 4 | Implement secure authentication, authorization, and session management mechanisms. |
| 5 | Audit and enhance application security configurations using logging and monitoring strategies. |
